

“Creating believable/immersive content (how games and films imitate life – and each other)”

Chad Greene

Art Director

Overview

- Intro/About me
- Central Media@Microsoft
- Film → Games → Film
- Technology/Hardware

About Me

Born and raised in Sandusky, Ohio

BGSU

- Bowling Green State University (Ohio)
- Graduated in 1992
 - Dual major: BFA Computer art & drawing
 - Using Atari STE's with 4 MB RAM
 - No saving to the hard drive– it was ALL on floppy disks!
 - 16 colors
 - All animation had to be scripted
 - All work was recorded straight to VCR
 - No internet or networking of computers

'The Ungrateful Dead' - 1991

Work History

Work History

Twenty years of experience, working in film, video games, advertising/graphic design, and broadcast tv

ANTZ

SHREK

TIGER WOODS PGA TOUR

SPIDER-MAN 2

Current job/role – Art Director (Central Media @ Microsoft Studios)

- CM Group overview
 - Multi-discipline team (audio, graphic designer's, tech artist's, animators, concept artist's, modelers, vfx/lighting, etc)
 - Working on a range of projects that cover Xbox 360, Tablet/PC, Windows Phone and other entertainment related products

Current job/role – Art Director (Central Media @ Microsoft Studios)

My focus and challenges:

- Art Direction – Xbox 360, PC's/tablets, phones, and other entertainment related projects
- Immersive / believable content
- Workflows/pipelines for content creation
- Narrative Design / Transmedia
- New exploration – Kinect /Smart Glass

Film → Games

Halo 1

- Graphic Improvements over the years → games getting closer to film
 - Tech impacts game creation
 - Normal maps
 - Dynamic lighting
 - Camera and vfx
- Film *and* games adapt tech from Siggraph/GDC and other conferences that feature the work of researchers and shared learning's from other developers

Film → Games

Halo 4 – 343 Studios/Microsoft

Film → Games

Halo 4 – 343 Studios/Microsoft

Film → Games

Halo 4 – 343 Studios/Microsoft

Film → Games

- Its not *just* technology improvements
- Staffing and specialization
- Pipeline/workflow changes
- Industry is maturing and learning (look at how long movie-making and Hollywood has been around)

Film → Games

Specialization – lighting ; 'Agent under Fire' (EA) - 2001

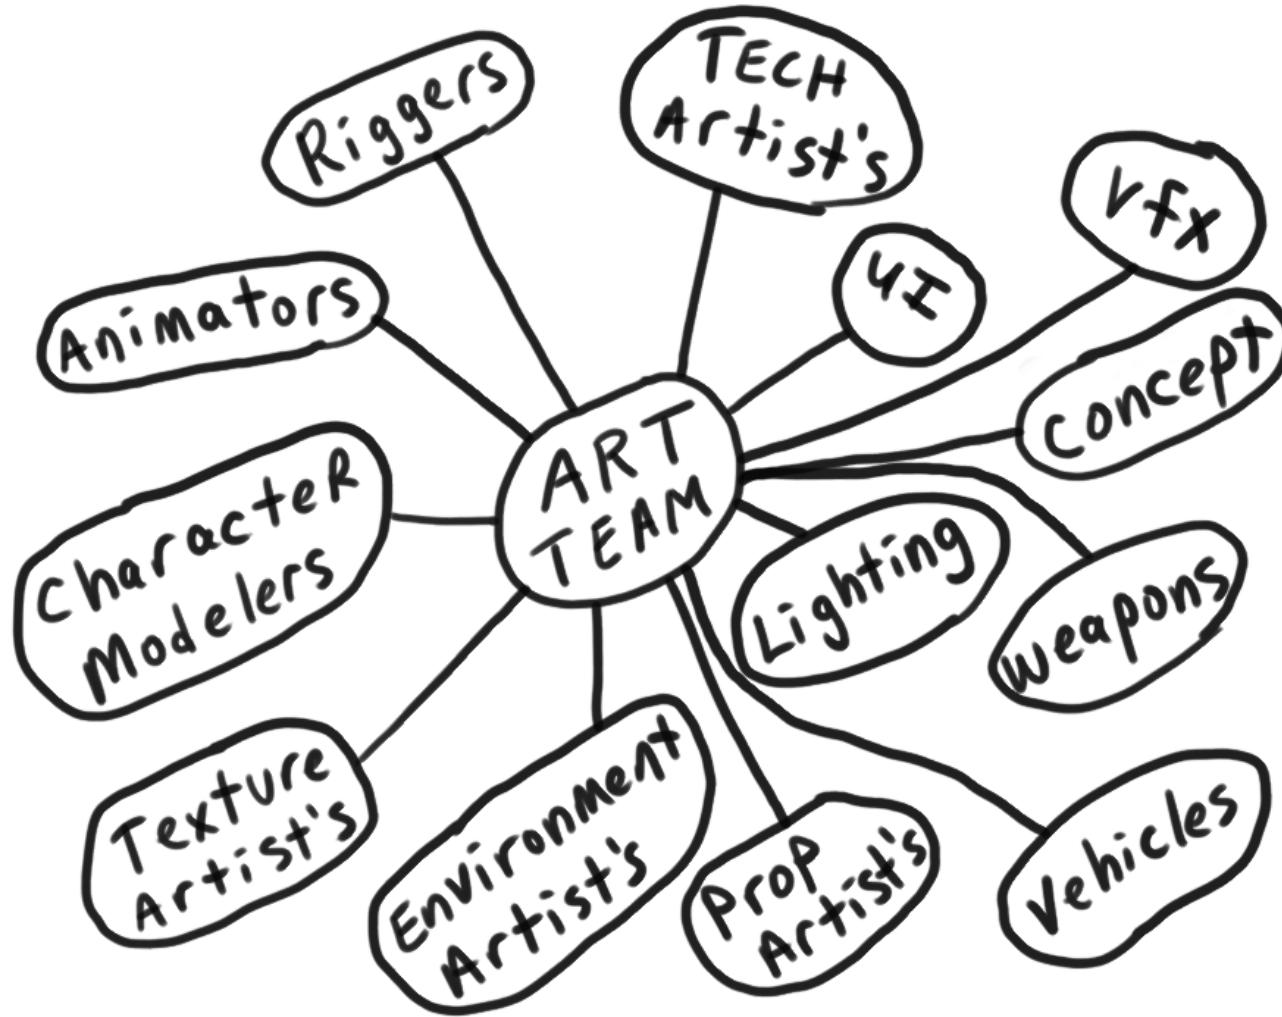

Film → Games

Specialization – rigging ; 'Tiger Woods PGA' (EA Sports) - 2002

Film → Games

Games (art team)

Film → Games

Film (art team)

- In addition to the previous slide for staffing:
 - Cloth sim teams
 - Hair sim teams
 - Storyboard team
 - Matte painting dept
 - Animation specialist's
 - VFX specialist's
 - Camera/layout dept
 - Face/muscle team
 - TD's for each dept
 - Lighting teams (per area)
 - CG supervisors/VFX supervisors
 - Art Direction team (Production Designer, etc)
- Larger staff (larger cost, too)
- Specialization down to the minutia

Film → Games

- Film Tricks & Techniques and pipelines/workflow are influencing how games are being created (examples to follow)
- More memory (RAM) for video games – higher texture resolution
- Budgets determine how much internal staff vs outsourcing (and what new tech can be researched and implemented)
- Practices such as calibration (having staff & tools) – and having this be mandatory
- Even Hollywood is now outsourcing to places around the world to reduce cost

Film → Games

Low poly models

USC Institute for
Creative Technologies

The ICT Graphics Laboratory develops new techniques for creating and displaying photo-real computer graphics of people, objects and environments. Research areas include image-based lighting and 3D displays. The lab's Light Stage systems for creating detailed digital doubles have been used in motion pictures, including Avatar, and honored with an Academy Award.

HDR Imaging

High dynamic range imaging (HDRI or HDR) is a set of methods used in imaging and photography, to allow a greater dynamic range between the lightest and darkest areas of an image than current standard digital imaging methods or photographic methods.

Rendering

Screen Space Ambient Occlusion – CryEngine3 (Crytek)

Screen space ambient occlusion (SSAO) is a rendering technique for efficiently approximating the well-known computer graphics ambient occlusion effect in real time. It was developed by Vladimir Kajalin while working at Crytek and was used for the first time in a video game in the 2007 Windows game *Crysis* made by Crytek.

Uncharted 2: Among Thieves (Naughty Dog)

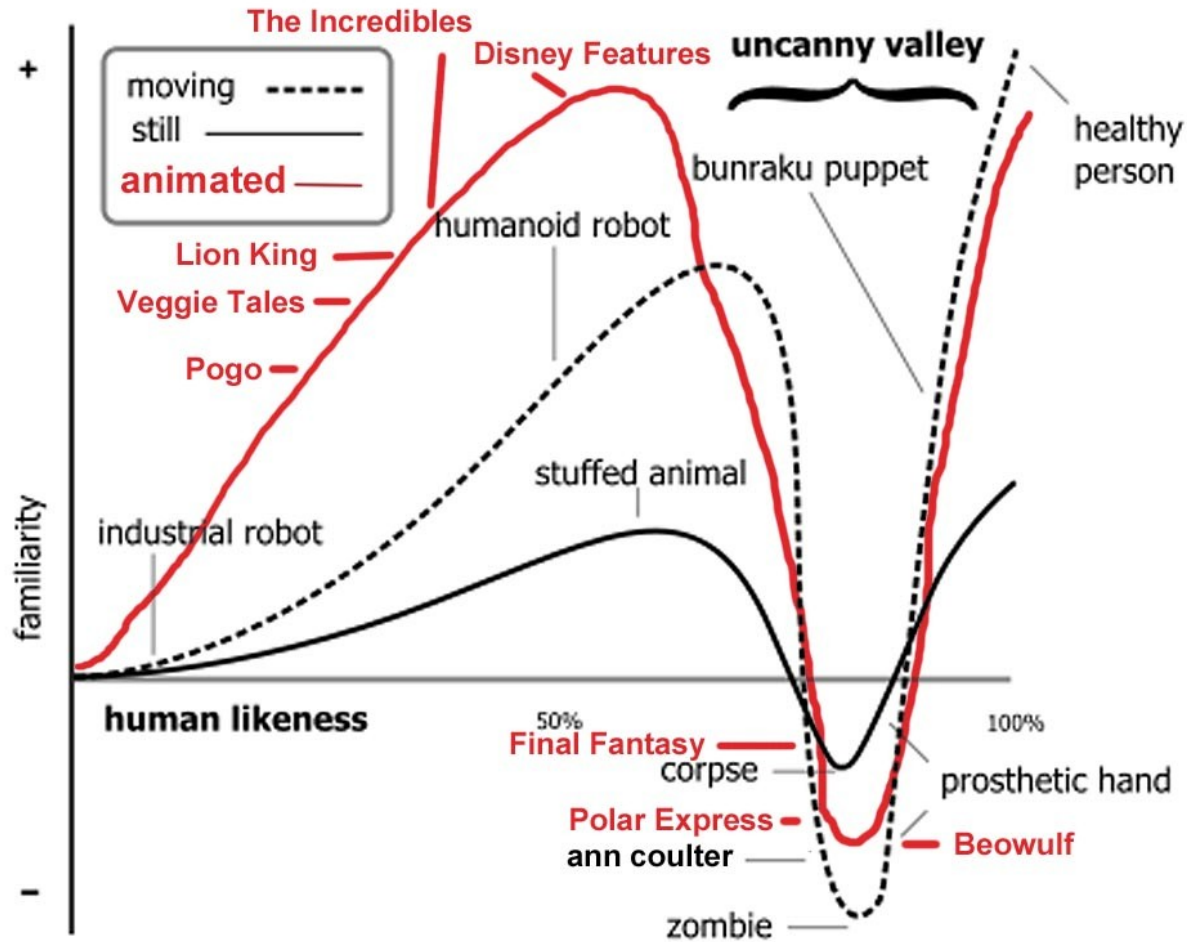

The Uncanny Valley

The **uncanny valley** is a hypothesis in the field of [robotics](#)^[1] and [3D computer animation](#),^{[2][3]} which holds that when human replicas look and act almost, but not perfectly, like actual human beings, it causes a response of [revulsion](#) among human observers. The "valley" refers to the dip in a graph of the comfort level of humans as a [function](#) of a [robot](#)'s human likeness.

The Open Kinect project – THE OK PRIZE – get \$3,000 bounty for Kinect for Xbox 360 open source drivers

Hi from team Adafruit, we're going to do our first ever "X prize" type project. Hack the Kinect for Xbox 360 and claim the ~~\$2,000 bounty~~ NOW \$3,000

Bounty offered for open-source Kinect driver

by Daniel Terdiman | November 4, 2010 12:50 PM PDT

 [Follow](#)

The first person or team to come up with an open-source driver for Kinect could win \$1,000 from Adafruit Industries.
(Credit: Microsoft)

Update at 4:03 p.m. PT: This story has been modified with response from Microsoft.

The first person who figures out how to build an open-source driver for Microsoft's much-hyped new Kinect motion controller could win a \$2,000 bounty offered by a leading open-source hardware developer.

Kinect, which launched today, is currently available solely for Microsoft's Xbox 360 and may well someday be extended to the Windows platform. But for New York-based Adafruit Industries, that's not enough.

And that's why Adafruit--led by MIT Media Lab alum Limor Fried and Make magazine Senior Editor Phillip Torrone--is offering two grand to someone who can figure out how to decouple the hot new device from Microsoft's gaming machine.

The bounty will go to the "first person or group to upload code and examples under an open-source license to (social-coding site) GitHub."

"Microsoft does not condone the modification of its products," a company spokesperson told CNET. "With Kinect, Microsoft built in numerous hardware and software safeguards designed to reduce the chances of product tampering. Microsoft will continue to make advances in these types of safeguards and work closely with law enforcement and product safety groups to keep Kinect tamper-resistant."

[Aerospace](#) | [Kinect](#) | [Boeing](#) | [Microsoft](#) | [Diana Klug](#)

Thanks to Microsoft Kinect, Boeing doesn't have to lug around a real 737 to trade shows.

The commercial aircraft giant is using the software giant's technology to create a virtual tour of the next-generation Boeing 737 plane, using Kinect, Silverlight Deep Zoom, and Windows 7 Touch and Azure.

Digital marketing agency [Wire Stone](#) created [Boeing 737 Explained](#).

The screenshot shows the OpenKinect project website. At the top right, there is a "Log in / create account" link. Below it are tabs for "page", "discussion", "view source", and "history". The main heading is "Main Page" followed by the "OPEN KINECT" logo. A welcome message reads: "Welcome to the OpenKinect project". Below this is a language selection menu with options: English, Español, Français, Italiano, Português do Brasil, and 中文(简体). The "About" section describes the project as an open community for using Xbox Kinect hardware with PCs and other devices, mentioning work on free, open source libraries for Windows, Linux, and Mac. It states that the community has over 2000 members and focuses on the libfreenect software, which is available under an Apache20 or optional GPL2 license. A list of links includes source code on GitHub and instructions on how to get started. The "Communications" section provides information on how to participate, including subscribing to mailing lists, following on Twitter (@openkinect), meeting in person through Meetup Groups (NYC, QC-Colab Davenport, IA, San Francisco), and chatting on IRC (#OpenKinect) or using a web-based chat. The "Project information" section is partially visible at the bottom.

Xbox Smart Glass

Announced at E3 (2012)

Xbox Smart Glass

What is it??

Xbox Smart Glass

- Exciting way to interact with content
- Uses existing devices
- Idea of existing apps talking – connecting devices and experiences
- Smart Glass is going to be a free product, launched before the end of this year

Xbox Smart Glass

- your tablet can serve as a kind of secondary controller.
- You can call football plays in Madden, or set up multiplayer matches games like Halo 4.
- For casual gamers, a karaoke game will stream song lyrics directly to your tablet.

Xbox Smart Glass

- You can even download all your goodies directly to your tablet, then stream them straight to your TV—no wires or DVR necessary.
- Microsoft is teaming up with Paramount, HBO, and other soon-to-be-announced partners to package additional SmartGlass content.
- Open SDK coming – exciting ways to innovate and create. Community is encouraged to invent, create and collaborate
